## **R&M Manufacturing Relocates to Buffalo, MN**

Buffalo, MN – On April 20, 2008, R&M Manufacturing announced that it has merged its manufacturing facilities to an 83,000 ft plant in Buffalo, MN.

According to its President, Todd Dyste, we selected Buffalo, MN as a result of careful analysis. The community is able to support our growing requirements for engineers, machine operators, welders and administrative support staff. Many of its existing managers are located in this community, which was a primary reason for the move. Three manufacturing plants and two warehouses were consolidated.

Positions with the company were offered to all its existing employees as well as workers in the surrounding community.

### **About R&M**

R&M Manufacturing, a privately held company has provided quality products for its customers since 1969. It merged with Die Products in 2007. It provides engineering excellence for tool and die design, progressive stamping, short run stamping and sheet metal fabrication.
